Regarding: Remake Learning's Badge-Enabled Playlists & Pathways RFP

To: The Sprout Fund

Dear Mac Howison and other Grant Administrators,

It is our pleasure write a letter in support of the proposal Play.CLOH.org being submitted to The Sprout Fund by one of our long-time community supporters, Mark Rauterkus. Coach Rauterkus has been with LiveCode since it was acquired, as our forum records show he joined back in 2006, attended a world-wide developer conference in New Jersey and aided the LiveCode Kickstarter campaign in 2013. Likewise, fellow Pittsburgh LiveCode developers, Claire and Marc Siskin, are supporting this project. They have done impressive work in teaching news people how to cross the digital divide with LiveCode. You can expect others from the greater LiveCode community to chip in with these efforts as well.

The LiveCode is a rapid application development software package with an open source version that allows students and professionals to create projects on various platforms (Windows, Macintosh, Linux, Servers, iOS, Andoid and Raspberry Pi). We are certain that LiveCode is a perfect match for students, teachers, coaches and volunteers in Pittsburgh. Many schools and teachers in Scotland have been using LiveCode with great satisfaction. With the new upgrade and with programs proposed by Remake Learning's Badge-Enabled Playlists & Pathways, we are confident many will discover the LiveCode tool and put it at the top of the list in educational settings.

Feel free to visit our site and download the software at LiveCode.com.

LiveCode is fully equitable, accessible and open. The software is free to download. Dozens of resources are available for learning how to use the software. LiveCode provides plenty of opportunities for student learners to actively produce, create, experiment and design their own apps.

In conclusion, the LiveCode team fully supports the efforts of Play.CLOH.org and will assist with technical support as always. Perhaps we can meet in person at a EDU coding and Remake Learning event in Pittsburgh in the future.

Sincerely yours,

Kevin Miller, CEO
